Barcode Printing on Primary Pack !

Extremely difficult to print & scan
on high-speed blister, strip packing lines

Bilcare provides pre-printed non-clonable tags of size 12x12 mm linking with GTIN and Unique Serial Number.

Additionally the same tag also has an authentication feature "nonClonableID" combined with the barcode in compliance with the notifications making the tag & pack non-duplicable.

Bilcare has developed specialised in-line application system for affixing the tamper-evident primary pack tags.

The primary pack tags are supplied in a roll form and can be applied on blisters, strips etc. on packing lines.

The primary pack tags post application on primary packs are scanned in-line and data uploaded in the system.

Parent-child relationship also gets established in-line.

Bilcare
Research

brings experience

of implementing track & trace on primary pack
with complete integration of secondary and tertiary packs

Secure Track & Trace Solution

- Experience in implementing Secure Serialisation / Track & Trace for primary, secondary and tertiary as per government notifications
- Technology capable to handle serialisation mandates of various countries
- BATS-PTA application for easy implementation at manufacturing and supply chain sites
- SAP/OER platform to handle billions of records of serialised data and its retention
- Authentication technology combined with Track & Trace making the system completely secure.
- Complete accountability for integration & outcomes
- One-stop solution ... no mixed priorities of selling only hardware or software
- Scalable to extend implementation across the supply chain
